

Progress Report Week 3

Dave DaCosta, Jake Adamson, Rob Cucchiara, Nathan Ko

Overview: This was a light week because of exams and Thanksgiving but we did managed to get a minimal viable product. Mean app can do almost everything except search restaurant

Teamwork: Help each other by checking each other's code and helping merge it.

Individual Contributions:

- Dave: Work on Yelp authentication
- Jake: Got dummy data to show up in the want to visit and finished the need activity and cursory class. Helped a little bit on the forms.
- Nathan: Individual restaurant items can now be added and deleted from the database. The ability to edit the restaurant is also added as well. The form also detects if any changes were made and notifies the user before discarding the changes. The form also checks to make sure the user is intending to delete a restaurant before deleting.
- Rob: Polished gui.

To Do: add machine learning and add the authentication and take pics. Finish up the ListView UI and clean up the Form activities
