<u>Progress Report Week 4</u>
Dave DaCosta, Jake Adamson, Rob Cucchiara, Nathan Ko

<u>Overview</u>: Added ML in the form of sentiment calculator provided by IBM Watson. What it does is rate the restaurant by evaluating the note and Yelp Api now works. We are pretty much done.

<u>Teamwork</u>: Help each other get through roadblocks.

<u>Individual Contributions</u>:
- Dave: Finished Yelp Api Querying. Search Activity returns yelp listview items that can now be sent to Prospective and Visited Restaurant form activities for Database entry.
- Jake: Tried many ML api until finally found the IBM's Watson Api also fixed some bugs. Also made changes to how data in the database is saved now its asynchronous.
- Nathan: Help merge code and answered database questions help fixed Dave's bugs. Did some additional maintenance work.
- Rob: Cleaned up and reorganized the ListViews. Continued to iterate on the form activities. General maintenance on the UI as features were implemented during the week. Did some minor bug fixing

<u>To Do</u>: Polish Gui and testing to find any bugs.
